**Waste Solutions  
for your Business**

## Minimise your waste and your costs

There is increasing demand for businesses to take responsibility for their environmental impact. Consumers are more aware of the waste they produce and the impact it has on the planet, and they expect businesses to do their part in reducing waste and promoting sustainability.

At the same time, the Government is introducing stricter regulations and increasing the cost of waste disposal to landfill. It's harder than ever to make the right choices with your waste and you need a partner who'll help you make the best choices for the planet and your bottom line.

We offer waste services that are reliable, easy to use and empower you to make cost effective choices that are better for the environment.

**Whatever your waste, whatever your situation, we can help.**

## How we'll help you

We have services that can help you manage all your waste sustainably and efficiently, recovering as much as possible to feed into the circular economy.

Our solutions will help you take control of your waste:

- **Regular and reliable collections to keep your premises tidy and odour free.**
- **Total oversight and understanding of your waste production.**
- **Best practice resource recovery.**

We'll recommend changes to your services as your business grows, with monthly sustainability reports and a complimentary annual site assessment to help you stay in control of your waste and costs.

## Our solution

### Our team of sustainability experts can also help with:

- **Waste and recycling training for your team**  
It's important for everyone to be onboard and helping drive your business' sustainability.
- **Carbon reporting**  
We can provide you with a monthly report outlining your general waste carbon emissions.
- **Waste audits**  
Our team will do a deep dive into your waste to understand what you are throwing away and propose best practices to help you recover materials that can have another life.
- **Procurement advice**  
We'll give you advice on how to make better purchasing choices so you can recover more and create less waste.

## Our range

No matter the amount of waste you produce we'll have a bin and collection schedule to suit. We'll work with you to find the right solution for your business.

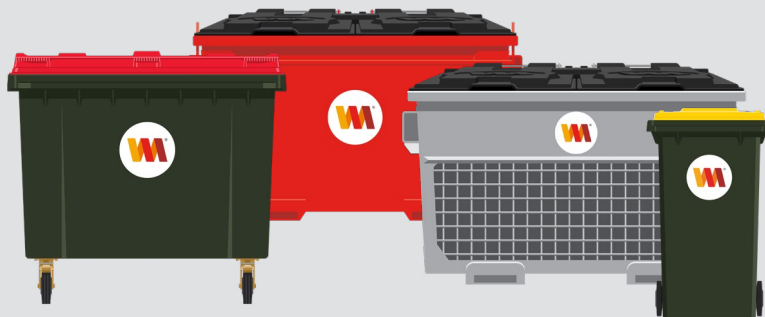

### Our most popular options are:

#### Front Load Bins and Cages

Trusted as the go-to solution for all types of materials, with easy-lift lids, a range of sizes and regular collection schedules.

#### Wheelie Bins

Perfect for small spaces or hard to access areas, they're easy to move and ideal for collecting lower volumes of waste and recycling.

We have options such as skip bins or compactors for customers with larger volumes of waste.

#### Plastics and packaging

We can help you limit your plastic and packaging waste and provide the best reuse and recycling options for the waste you can't avoid.

We also have solutions for single stream plastics such as grade 1, 2, 3 and 5 plastics and bulk bags.

#### Other recyclables

Your other mixed recyclables such as plastics and cans will be collected and sorted for recycling.

#### Food waste and organics

We'll recover your food and organic waste and either process it into compost (we are NZ's largest composter!) or work with our processing partners on other solutions that improve Aotearoa's soil health.

#### Out of the box solutions

If you have another material you'd like to recycle or recover, we can help. Our Circular Services experts will assess the volume of material you can supply and find a workable circular outcome.

#### Hazardous and medical waste

We can help with hazardous or medical waste. Our Technical Services team will give you peace of mind that your waste is responsibly processed and safely disposed of, so you can focus on your business.

#### General waste

When we've extracted every material that can be reused, repurposed or recycled, whatever waste remains goes to landfill. We are very proud that the circular journey continues at our modern, engineered landfills. We collect over 90% of the biogas naturally produced from decomposing waste and convert it to electricity to feed into the national grid.

**Whatever your waste, whatever your challenges, we can help. Let us show you what's possible.**
